Selecting the correct ear tip

Selecting the correct size of ear tip takes practice

In general, flanged or mushroom-shaped ear tips will be used for most testing (Impedance, DPOAE, TEOAE and Automated ABR).

Sometimes, an umbrella-shaped ear tip will be used for performing a quick impedance screening.

The table can be used as a guide to help you select the appropriate ear tip size.

Age	Ear tips inserted against ear canal	Ear tips inserted against entrance of ear canal			Ear tips for Echo-Screen®	Ear tips for AccuScreen®
0.5 y/o	 Green, pediatric				 4.0 mm, ANA	 3.7 mm, AOT
					 4.5 mm, ANA	 4.0 mm, AOT
		 3-5 mm, flanged	 3-6 mm, green	 6 mm, green	 5.0 mm, ANA	 4.5 mm, AOT
	 7.5 mm, umbrella	 4-7 mm, flanged	 6 mm, yellow		 infant tree, ANA	 5.0 mm, AOT
	 9 mm, umbrella	 5-8 mm, flanged			 mushroom, ANA	 4-7 mm, AOT
10 y/o	 10 mm, umbrella	 7 mm, mushroom	 7 mm, red	 7 mm, yellow		
	 11 mm, umbrella	 8 mm, mushroom	 8 mm, blue	 8 mm, red		
	 13 mm, umbrella	 9 mm, mushroom	 9 mm, green	 9 mm, blue		
		 10 mm, mushroom	 10 mm, yellow	 10 mm, green		
	 15 mm, umbrella	 11 mm, mushroom	 11 mm, red	 11 mm, yellow		
Adults		 12 mm, mushroom	 12 mm, blue	 12 mm, red		
	 19 mm, umbrella	 13 mm, mushroom	 13 mm, green	 13 mm, blue		
		 14 mm, mushroom	 14 mm, yellow	 14 mm, green		
		 15 mm, mushroom	 16 mm, red	 16 mm, yellow		
	 22 mm, umbrella	 19 mm, mushroom	 18.5 mm, blue			

Why use ear tips for single use only?

Sanibel Supply® recommends using disposable ear tips for single use only to stop ear infections from spreading

At Sanibel Supply® we think that most audiologists would agree with us that it is crucial to avoid inadvertent transmission of disease within the audiology clinic. The good news is that it is quite easy to ensure that ear infections are not spread from one patient to another; use a new ear tip for each patient, and you will significantly reduce or eliminate the incidences of cross contamination.

Cerumen may be an infectious agent

Cerumen is not considered an infectious agent unless contaminated with blood or mucus, and due to its color and viscosity, visual detection of blood or ear discharge contaminants may be difficult. Therefore, you should treat cerumen as a potentially infectious agent. It is especially important to be mindful of using new tips when testing children and those with weaker immune systems, such as the frail and elderly as they are more susceptible to infections.

Are disposable ear tips expensive?

Sanibel Supply® offers volume discounts on ear tips. This will often offset the time and cost involved in the ear tip cleaning process.

Be more cost effective in your clinic

By using a new ear tip pr. every patient, you reach a seal much more reliable than with re-used ear tips. How often have you not been fumbling for minutes before you get a seal with a patient? Using the right ear tip and a fresh one pr. patient ensures you a reliable fit with every patient, meaning you can calculate less minutes for testing a patient and in most cases allow you to have an extra patient pr. day without having stressed out personnel. The cost of using one ear tip pr. patient is far less than what you earn on your next patient, plus you can promote your clinic as taking patient safety and hygiene seriously.

6 strong reasons why you should use a new ear tip after each patient:

1

You reduce the risk of cross contamination between your patients

Unfortunately, it is not possible to be 100% certain that complete decontamination has taken place when cleaning ear tips.

2

You minimize the risk of non-sealing ear tips

Ear tips degrade over time, which can make it more difficult to attain a good seal, hence leading to less accurate results.

3

Your patients avoid allergic reactions from cleaning agent residue

Residue from cleaning agents may cause allergic reactions in some patients.

4

Your patients will appreciate it

Patients feel safer and are more comfortable knowing that new ear tips are being used.

5

It's so much easier

Cleaning ear tips takes time, so why not give your staff the time to do what really matters?

6

It's so much faster

A fresh ear tip creates a seal quicker and more reliable, so you do not waste time performing a standard procedure.

8106365	Mushroom (green)	Bag/50 pcs

Save time pr. patient, earn more money and help more patients!

Use a fresh ear tip pr. patient and be sure to reach a seal right away, when inserting the ear tip. A fresh ear tip contains the optimal conditions for reaching a seal when inserting it into the patients' ear, whereas a multi-used one often will cause you trouble and delay you in your process. By allowing yourself to plan less time pr. patient for testing, you can see more patients pr. day. That is worth much more than cleaning an ear tip, both for your clinic and your patients.

IT Select Series ear tips

Sanibel™ Probe Tube Removal Tool

- A = Probe
- B = Probe Tube Installer
- C = Attachment to probe cable
- D = Tube Remover

To Remove a Probe Tube

1. Place the front hole of the Probe Tube Tool over the end of the probe, as shown. The probe should be seated against the face of the tool and snap in place.
2. Squeeze the tool closed and hold it.
3. Twist the tool a couple of times while holding the tool closed and pulling away from the probe.
4. The probe tube will pull out from the probe. Discard the probe tube.

To Install a New Probe Tube

5. Place a new tube into the hole on the top of the tool.
6. Align the probe with the tube.
7. Push the probe onto the probe tube until the probe contacts the face of the probe tube tool and a snapping sound is heard.
8. Slide the tool off, leaving the tube in place in the probe.

ABR

Sanibel™ Infant EarCup™ with snap or tab electrodes

Reduce test time! Test on both ears in one screening. Compatible with Titan™, AccuScreen® (1st generation), MB II Classic and Echo-Screen®. Use only with equipment calibrated for over-ear style disposables. Disposable over-the-ear earphones are high quality, low cost, and ideal for bilateral newborn hearing screenings. 1 set consists of 2 Infant EarCups™, 3 snap or tab electrodes and 1 alcohol pad.

For use with a range of different providers of newborn hearing screening equipment: **Grason Stadler:** Novus. **Interacoustics:** Titan, Sera. **Maico:** easyScreen, MB II Classic. **Madsen/Otometrics:** Accuscreen. **Natus:** Biologic Abear, Echo-Screen.

Easy ABR newborn hearing screening with the

EARturtle™

The EARturtle™ disposables ear couplers is a new, soft, and easy-to-mount disposable ear coupler for ABR newborn hearing screening.

You can use it with the RadioEar IP30 adapter and similar transducer couplers.

- ✓ Safe to apply on sensitive skin
(complies with ISO 10993-1:2018)
- ✓ Consistent and reliable performance
- ✓ Durable and user-friendly design

EARturtle™ disposables ear couplers

For use with a range of different providers of newborn hearing screening equipment: **Interacoustics:** Titan, Sera, **MAICO:** easyScreen, MB 11 Classic, **GSI:** Novus, **Natus:** Echo-Screen, Echo-Screen III, Algo 3i, Algo 5, Algo 7, Biologic Abear.

No recalibration needed for any of the above-mentioned equipment.

Choose the correct electrode for optimal performance

Sanibel Supply® offers various kinds of surface electrodes for ECG as well as EEG and ABR. Surface electrodes vary in size, adhesion, connectivity and frequency (test category).

The frequency plot to the above shows the electrical stimuli sent directly through the system and compared to the surface electrode (here ABR). The two lines are similar and demonstrate that the surface electrode can be used for ABR testing.

At Sanibel Supply®, we always test and validate our surface electrodes to ensure optimal performance for your testing!

Disposable electrodes

75 pcs

Vermed Wetgel Snap Electrode

Pre-gelled hydrogel electrode with Ag/AgCl sensor. Very suitable for diagnostic follow-up. Used for newborn screening, industry-wide. Packaged 3 pcs. per pouch.

Part no.	Unit
8516221	Box/75 pcs

100 pcs

Vermed Tab Electrode

Rectangular tab electrode used for newborn screening, industry-wide. 12.7 x 22.9 mm. Conductive Adhesive Hydrogel. 10x10 pcs. per pouch.

Part no.	Unit
8516225	Bag/100 pcs

60 pcs

Vermed Hydrogel Snap Electrode

Large soft electrode size making it very suitable for newborn screening and ABR measurements. Cloth material makes it convenient to wear. Size 3.4 x 2.2cm.

Part no.	Unit
8516907	Bag/60 pcs (3x20 pcs)

60 pcs

ABR

Vermed Hydrogel Snap Electrode

Smaller than the rectangular version, but otherwise similar. Good, soft electrode size making it very suitable for newborn screening and ABR measurements. Cloth material makes it convenient to wear.

Part no.	Unit
8102022	Bag/60 pcs (3x20 pcs)

100 pcs

Vermed Tab Electrode

Rectangular tab electrode used for newborn screening, industry-wide. 22.9 x 34 mm. Conductive Adhesive Hydrogel. 10x10 pcs. per pouch.

8011346	Set/5 pcs RWBYK

Surface electrodes tailored to your need

At Sanibel Supply® we believe that it is important to choose the correct surface electrode for each specific recording and patient type.

Wetgel or hydrogel electrodes?

A wetgel electrode consists of water, thickener, ionic salts, surfactants and bactericides or fungicides. Wetgel migrates easily and rapidly onto the skin surface, reducing impedance levels, which in turn will generally result in lower noise in the recording.

A hydrogel surface electrode is less adhesive when compared to wetgel, making it particularly suitable for newborns.

Chloride salt concentration

The higher the chloride salt content, the more conductive the electrode. Higher salt content (10% and above), pre-gelled surface electrodes are useful for making fast, high quality measurements of biopotentials. High conductivity electrodes generally have reduced artifact, due to the lower impedance generated between electrode and skin surface. As the chloride salt content drops, there is a corresponding reduction in electrode conductivity.

If the chloride content is below 10%, the electrode can then be employed for longer recording times, with a reduced risk of skin irritation. As a rule of thumb, wetgel has a chloride content of 10% and hydrogel 4%.

It is important to use electrodes with similar chloride salt content when testing.

The impedance of the electrode/skin junction is highly dependent on the electrolyte type and the chloride salt concentration. For example, a hydrogel electrode with 4% chloride concentration will have approximately 10x higher impedance than a wet liquid gel electrode with 10% chloride concentration, after first application to the skin.

Adhesion

An advantage of a conductive adhesive is that the active surface can be as large as the electrode itself because no additional adhesive strip is needed. The Sanibel disposable electrodes come with a range of adhesive qualities. All electrodes are designed to adhere well to skin surfaces, but the adhesion characteristics can be grouped according to the application:

- Strong adhesive
 - Moderate adhesive
- Strong adhesion is not recommended for newborns.

Skin preparation

For optimum electrode to skin conductivity, the skin should be lightly brushed with a gentle abrasive gel/wipe. **An alcohol wipe is not recommended to improve conductivity as this will only dry out the skin surface.**

Electrode cables

ABR

Sanibel™ ECoChG starter kit

For Eclipse™ and Bio-logic® AEP system. Includes cable, gel and 2 pcs TM electrodes.

Part no.	Unit
8013209	Set/4 pcs

Infection control

A clean clinic is also part of your professional image

Infection control is so much more than cleaning probe tips, protecting your personal computer's keyboard, and maintaining high standards within hygiene using e.g. disinfectant detergent for a quick and extensive disinfection of non-invasive medical devices.

When it comes to infection control, preventing germs, dirt and dust from spreading via other sources, is also of critical importance – both to the safety of your patients and yourself! Gloves, shoe covers, facemasks, and aprons are just some of the “accessories”, which can help you succeed in this.

Maintain high, professional standards and make your clinic an ever-safe environment for your patients, making the wearing of gloves, facemasks and other body protection wear a natural part of the “patient interaction” process.

Safety goggles

Part no.	Unit
8522417	1 pc

Nitrile examination gloves

For use at medical sites and at research institutes etc. Do not interact with petroleum oils, grease, solvents. Do not contain latex.

REM probe tubes for HA fitting

HIF

Sanibel™ REM probe tubes, type A

Universal fit, length 76 mm, beveled 45° angle tip and black marker ring.

Part no.	Unit
8104116	Tray/50 pcs

HIF

Sanibel™ REM probe tubes, type B

Fit all brands, **Interacoustics**, **Natus Aurical**, **MedRx** and **AudioScan**.

Part no.	Unit
8500360	Bag/40 pcs

50 pcs

HIF

Silicone tubes for SPL60™

For use with Affinity™ REM probe.

Part no.	Unit
8500700	Bag/50 pcs

The “REM effect”
– better fitting & fewer follow-ups!

Be sure of an individual and ideal fitting

Assurance of your fitting gives you confidence in your work

Confidence increases your credibility and client satisfaction

Client satisfaction means fewer follow-up appointments

Use Sanibel™ probe tubes for any equipment

We often hear from the industry that only the manufacturers' specific probe tubes should be used with their specific equipment. However, a recent comparative study by Sanibel Supply® disproves this myth.

In this study, our in-house audiologists and engineers compared the effects of different probe tubes on an Affinity^{2.0} system. They compared AudioScan tubes (red), Otometrics tubes (blue), Sanibel™ tubes (orange) and Sanibel™ tubes (grey).

This involved running each tube via the 'tube calibration' process and then comparing the following REUG curve when the tube had been left in the calibration position.

The investigation showed no significant difference in the REUG curve and all probe tubes achieved the same result when the calibration process had been run correctly.

Reasons to maintain high-level skills in the art of ear impressions

The need to maintain the skills within ear impressions using quality products when working with patients is evident. Your patients will thank you for a high level of care and professionalism, long-term. Science and art come together when making a good ear impression. A deep understanding and conscious choice of the types of materials used, combined with the professional desire to be precise and demonstrate great quality and accuracy in your work, will help you make great impressions for each and every one of your patients – regardless of their different ear canal anatomy.

There is a need to be skilled at ear impressions for several other reasons;

- 1- The concept of "patient delight": One of the most frequent components of "delight" is you – the professional. Sanibel Supply agrees with all hearing professionals viewing the skill of impression taking as a critical one that impacts the potential to delight patients.
- 2- Bad impressions result in bad earmolds or shells, resulting in bad fittings and dissatisfied patients.
- 3- The opportunity to provide custom solutions for your patient in a non-

custom world is one of the key benefits of being skilled and proficient at making ear impressions.

- 4- The win-win of demonstrating your professionalism through the care and effort it takes to provide the best impression of anatomy, ear texture, and desired products.
- 5- There are a lot of other options where we might need an impression, other than when fitting non-custom technology.

Different varieties available, please ask us for details

Otoform® A flex

Soft, flexible, easy processing. Recommended for CIC impressions, narrow auditory canals or people sensitive to pain. Final hardness approx. 30Shore A.

8522105	1 pc

Bite blocks

Used to stabilize the jaw for open mouth impressions.

Part no.	Unit
8527849	Bag/100 pcs
8527850	Bag/25 pcs

HIF

Impression material A-ZOFT

Premium quality and smooth initial consistency. Extremely soft, easy to remove and allows highest impression precision. Final hardness approx. 30Shore A.

Part no.	Unit
8515424	2x800 g jars
8515426	40 foil bags (sets 2x8 g)

Mixing pad

Part no.	Unit
8522106	Bag/100 sheets

Mixing Tips for 50ml double cartridge

Use with 8522433.

Part no.	Description	Unit
8522432	Pink, 5,4 mm	Bag/100 pcs
8522183	Blue, 6,5 mm	Bag/100 pcs

Large Mixing Spatula

Part no.	Unit
8522104	1 pc

Impression Syringe, grey

Easy to fill, inject and clean. Provides a stable and easy injection. 4 mm.

Part no.	Unit
8515445	1 pc

Tubing

Pre-bent Tubing

Quilled on one end for easy insertion into the earpiece and double bent to lie close to the head.

Part no.	Description	Unit
8527852	Standard #12	Bag/25 pcs
8527872	Medium #13	Bag/25 pcs
8527853	Thick #13	Bag/25 pcs
8527854	Extra Thick #13	Bag/25 pcs

Pre-bent Disappear Tubing

With a long quill for easy insertion into earmold. The tubing is perfectly formed, free from kinking, in flesh colour. Please note, tubing color is not guaranteed. Colour of tubes may vary from pictures.

Part no.	Description	Unit
8527855	Standard #12	Bag/10 pcs
8527856	Medium #13	Bag/25 pcs
8527857	Thick #13	Bag/25 pcs

Tubing Retention System (TRS)

Designed for all soft earpiece materials. Each TRS tube uses an acrylic ring to hold it in position in the earpiece. TRS tubes are easily replaced and will not tear silicone materials.

Part no.	Description	Unit
8527927	Thick #13	Bag/25 pcs
8527928	Super Thick #13	Bag/25 pcs

Pre-bent Tubing with Tube Lock

Tubing system that uses a brass retention ring for soft earpieces.

Part no.	Description	Unit
8527860	Thick #13	Bag/10 pcs
8527861	Super Thick #13	Bag/10 pcs

Pre-bent Stay Dry Tubing

Specially formulated tube helps prevent moisture buildup caused by humidity or perspiration.

Part no.	Description	Unit
8527873	Medium #13	Bag/10 pcs
8527874	Thick #13	Bag/10 pcs

Tube Lock without tube

Brass tube-lock for use with 13 thick and 13 super thick tubing.

Part no.	Description	Unit
8527858	Thick #13	1 pc
8527859	Super Thick #13	1 pc

Horn Tube

Uses the horn effect to increase response in the high-frequency range.

Part no.	Description	Unit
8527934	3 mm Medium	Bag/6 pcs
8527930	3 mm Thick	Bag/6 pcs
8527931	4 mm Medium	Bag/6 pcs

Horn TRS Tubes

Horn TRS tubes use acrylic rings to hold tubes in position. Designed for soft earpiece materials.

Part no.	Description	Unit
8527932	3 mm	Bag/6 pcs
8527933	4 mm	Bag/6 pcs

Libby Horn

Special tube designed to increase gain over conventional tubing. Ideal when using an analog hearing instrument and fitting a high frequency hearing loss. Also designed to allow for a friction fit into earmold without the need to damage soundbore when removing it.

Part no.	Description	Unit
8515663	4 mm	Bag/10 pcs
8515657	3 mm	Bag/10 pcs

Tube Puller, Monofilament

Soft and flexible enough to easily slip through the sound bore of an acrylic earpiece, allowing quick and simple tube replacement.

Part no.	Unit
8527877	1 pc

Tube Puller, Wire Loop

Rigid enough to slip easily through the sound bore of a vinyl or silicone earpiece, allowing quick and simple tube replacement.

Part no.	Unit
8527878	1 pc

Probe Set, Stainless steel

For probing, material removal.

Part no.	Unit
8527929	Set of 4 pcs

Scissors, 3.5"

Sharp scissors suitable for general use in the clinic.

Part no.	Unit
8527905	1 pc

Tubing Expander Plier

Stainless steel pliers with two-way lever spring allow you to quickly and easily stretch acoustic tubing before fitting it over earhooks, elbows, etc.

Part no.	Description	Unit
8527875	Curved	1 pc
8527876	Straight	1 pc

End Nipper Pliers

A perfect tool for trimming tubing from the end of a canal after the earmold has been retubed.

Part no.	Unit
8527900	1 pc

Clinical Tools

Needle Nose Pliers 5"

Needle nose pliers for a multitude of uses in the hearing healthcare clinic.

Part no.	Unit
8527898	1 pc

Sprue Cutter, 4.5"

A unique design easily trims tubing flush to the earpiece.

Part no.	Unit
8527935	1 pc

Tweezers

For a variety of clinical uses. Good for working on hearing instruments and other small parts.

Part no.	Description	Unit
8527902	Curved Point Precision Tweezers 6"	1 pc
8527903	Fine Tipped 4.75" Tweezers	1 pc

Precision Screwdriver set

Screwdriver set for making adjustments to hearing instruments or other precision work.

Part no.	Description	Unit
8527896	Four flat-tip screwdrivers and two Phillips tips.	Set/6 pcs
8527897	Six flat-tip screwdrivers, three Phillips tips, one needle-point tip, and one magnet tip.	Set/11 pcs

Surgical Blades and Handles

Suitable for cutting HA tubing.

Part no.	Description	Unit
8515427	Surgical blade handle No. 3	1 pc
8515428	Surgical blades No11	100 pcs

Loctite 406 Instant adhesive

An instant adhesive designed especially for the fast bonding of plastics and elastomeric materials where very fast fixturing is required. This product offers exceptionally low viscosity.

Part no.	Unit
8005067	1 unit

Alligator Forceps

Standard 5.5" stainless steel alligator forceps with serrated jaw. Not intended for invasive medical procedures.

Part no.	Unit
8527901	1 pc

5 main elements of a comprehensive HA fitting

1. Understanding the patient needs and history

A successful HA fitting entails an in-depth discussion of all the issues surrounding their hearing loss, these include: patient concerns, lifestyle and expectations. This needs to be done alongside a thorough medical history. It helps to set the scene.

2. Diagnostic audiometry and pre-fitting speech tests

Pure tone audiometry and word recognition testing are standard procedures performed using an Audiometer and the accuracy at this point in the process is of great importance.

3. Fitting and verification

Three minimum goals specified for a HA fitting are:

- 1- to make soft sounds audible,
- 2- moderate sounds comfortable, and
- 3- ensuring that loud sounds are not uncomfortable. You can get an objective view of the amplification in the ear using Real Ear Measurements, so you can fully understand what the hearing aid is doing for the patient.

4. Counseling and training

Patients should always receive thorough training and guidance in using their hearing aids as it will impact their success in using it as a rehabilitation tool.

5. Follow-up care and outcome measures

Post-fitting care is important to confirm if the user is utilizing their hearing aid to its greatest effect. Through discussion with their HCP, adjustments can be made if necessary, so that the user feels the best way possible about their hearing aids and are also given the opportunity to influence their hearing care.

Sanohra Earplugs - Fly

Sanohra Fly earplugs, suitable for children and adults. Reduces ear pressure experiences when flying.

Part no.	Description	Unit
8519351	EarPlugs Fly Kids, EN	1 set
8519352	EarPlugs Fly Adult, EN	1 set

SANOHRA fly ear plugs

Beyond "noise protection" it can be important to protect the ear drum (tympanic membrane) from changes in external pressure that are too rapid, e.g., during take off and landing phases in airplanes. For airplane passengers experiencing a problem with the pressure equalisation, the use of a special ear protection product means freedom from an unpleasant feeling or piercing pain during flight.

SANOHRA swim ear plugs

In case of injury to the ear drum or insertion of a vent tube, it is necessary to prevent water from reaching the ear drum through the outer auditory canal. Swimming, bathing or showering might cause inflammation of the middle ear. Staying in chlorinated water for an extended period of time can cause the skin in the outer auditory canal to swell and cause inflammation (otitis externa).

Sanohra Earplugs - Swim

Sanohra Swim earplugs, suitable for children and adults. Prevent water from getting into the ear canal and protect ears when exposed to water.

Part no.	Description	Unit
8519353	EarPlugs Swim Kids, EN	1 set
8520143	EarPlugs Swim Adult, EN	1 set

Bionix® Safe Ear Curettes

Bionix® Safe Ear Curettes allow healthcare providers to safely and gently remove cerumen with styles to match different types of wax and personal preference. Bionix® Safe Ear Curettes are flexible, to reduce injury to the ear canal, making them safer than stainless steel curettes. Seven color coded tip styles to meet specific needs, giving you “the right tool for any job” for every cerumen situation. Also available as a variety pack.

Part no.	Description	Unit
8515585	Green MicroLoop®	50 pcs/box
8515586	Orange ControLoop®	50 pcs/box
8515587	Red AngleLoop®	50 pcs/box
8519359	Purple VersaLoop®	50 pcs/box
8519360	Blue InfantScoop®	50 pcs/box
8519372	Yellow CeraSpoon®	50 pcs/box
8519361	White FlexLoop®	50 pcs/box
8519362	Variety Kit, (10 each style & 15 white)	

Bionix® Lighted Ear Curettes

Bionix® Lighted Ear Curettes combine illumination and magnification to help healthcare providers take less time to see and safely remove cerumen from the ear canal. The Lighted Ear Curette with magnification brilliantly illuminates the ear canal, eliminating the practice of blindly curettaging the sensitive area. Complete visualization shortens procedure time and increases efficacy. Box of 50 pcs.

All versions include 1 Light Source and 1 magnifying lens.

Part no.	Description
8519364	Lighted AngleLoop®, 4mm diameter
8519365	Lighted MicroLoop®, 3mm diameter
8519366	Lighted WaveCurette™, 2.5mm wide tip
8519367	Lighted FlexLoop®, 4mm wide tip
8519368	Lighted CeraSpoon®, 4mm wide tip
8519369	Lighted InfantScoop®, 2mm wide tip
8519373	Lighted VersaLoop®, 3mm wide tip
8519370	Lighted CeraPik™, 2.5mm concave tip. Great for hard, impacted cerumen and foreign bodies.

Why does ear wax accumulate?

Disruption of the self-cleaning mechanism of the ear causes cerumen to accumulate, causing different problems within our ears. These can be related to e.g. general health of the ear as well as hearing.

Anatomical variations, infectious or dermatological diseases can cause narrowing or obstruction of the ear canal. This can then interfere with the normal migratory process of foreign agents from the ear.

Indications for treatment and treatment options

When symptomatic, cerumen accumulation requires treatment. Usually, ear wax is defined as impacted, if it disrupts visualization of the tympanic membrane, as well as being connected with symptoms.

Often, removal of the cerumen is also done to allow a needed view of the tympanic membrane, e.g. for diagnostic purposes and audiometry.

The first-line option for treatment of

symptomatic cerumen in patients is cerumenolytics (softening agents, e.g. eardrops). The use of cerumenolytic agents, such as eardrops, increase the probability of cerumen clearance.

Patients with heavier impaction or ear canal disease may require irrigation or manual removal under microscope by a trained doctor or an ENT specialist.

Lighted Ear Curette Variety Pack

Part no.	Description
8519363	With 1 light source and magnifying lens. Includes 8 pcs. of the Lighted Flexloop and 7 pcs. of each of the other styles (not including Cerapik).

Lighted Forceps

Bionix Lighted Forceps combine illumination and magnification to help healthcare providers take less time to see and safely remove ear canal and nasal passage obstructions.

Part no.	Description
8519392	10 forceps, 1 light and 1 magnifying lens

OtoClear® Spray Wash Kit

OtoClear Ear Irrigation system gently directs water to the ear canal wall with three divergent streams, instead of directly at the Tympanic Membrane.

Part no.	Description
8519371	kit of 20x irrigator tips, 1x 470ml spray wash bottle, 1x ear basin
8519390	Otoclear Ear Basin, Box/3 pcs

New

Aidapter for hearing aid fitting

Clear Silicone Acoustics couplers. A unique silicone piece that clicks onto the HA-1 adapter.

You can use the Aidapter with receiver-in-canal (RIC) and thin tube hearing aids.

Compared to acoustic putty, the Aidapter™ provides a good acoustic seal and standardizes the coupling, ensuring repeatable coupler measurements.

The Aidapter™ also eliminates the hassle and hygienic issues of using acoustic putty.

Part no.	Description	Unit
8525568	Interacoustics	Bag/3pcs
8525578	MedRx	Bag/3pcs
